REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art does not teach a transmission type screen comprising, in combination with the additionally recited elements, a lenticular lens sheet with black stripes on the light exit surface and a diffusion sheet having uneven surface on one side where the uneven surface is joined to the lenticular lens sheet at the top portions of the black stripes.

Dubin (U.S. Patent No. 6,469,830) teaches either a gap between the lenticular surface and the diffusion screen, no black stripe or black stripes on the light entrance surface. Moshrefzadeh (U.S. Patent No. 6,519,087) teaches an opaque matrix bonded to a rough surface but teaches a layer of beads rather than a lenticular sheet and it teaches a matrix rather than stripes. Mitani (U.S. Patent No. 5,581,407) teaches a Fresnel lens sheet, a lenticular lens sheet with black stripes on the exit surface which is in tight contact with a diffusion surface which (in figure 1) has a rough surface. The present invention is distinguished from Mitani in that the uneven surface is not joined to the lenticular lens sheet at the top portions of the black stripes. Mitani relates to comparative example 1 discussed on page 17 of the specification where the layers are laminated layers. This is distinguished from claimed invention by the applicant's specification.

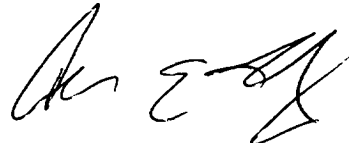

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
